21,473 real sightings of about 30 kinds of clownfish. Can you find these 12? Tick them off!

Places people have spotted clownfish — Coral reefs

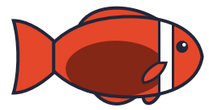

Two-band anemonefish
Amphiprion bicinctus
The only clownfish that lives in the Red Sea.

Common clownfish
Amphiprion ocellaris
The most famous clownfish, and the one you're most likely to meet in an aquarium.

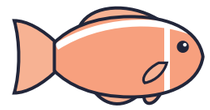

Clark's anemonefish
Amphiprion clarkii
The most widespread clownfish of all. It can live with all ten kinds of anemone that clownfish use.

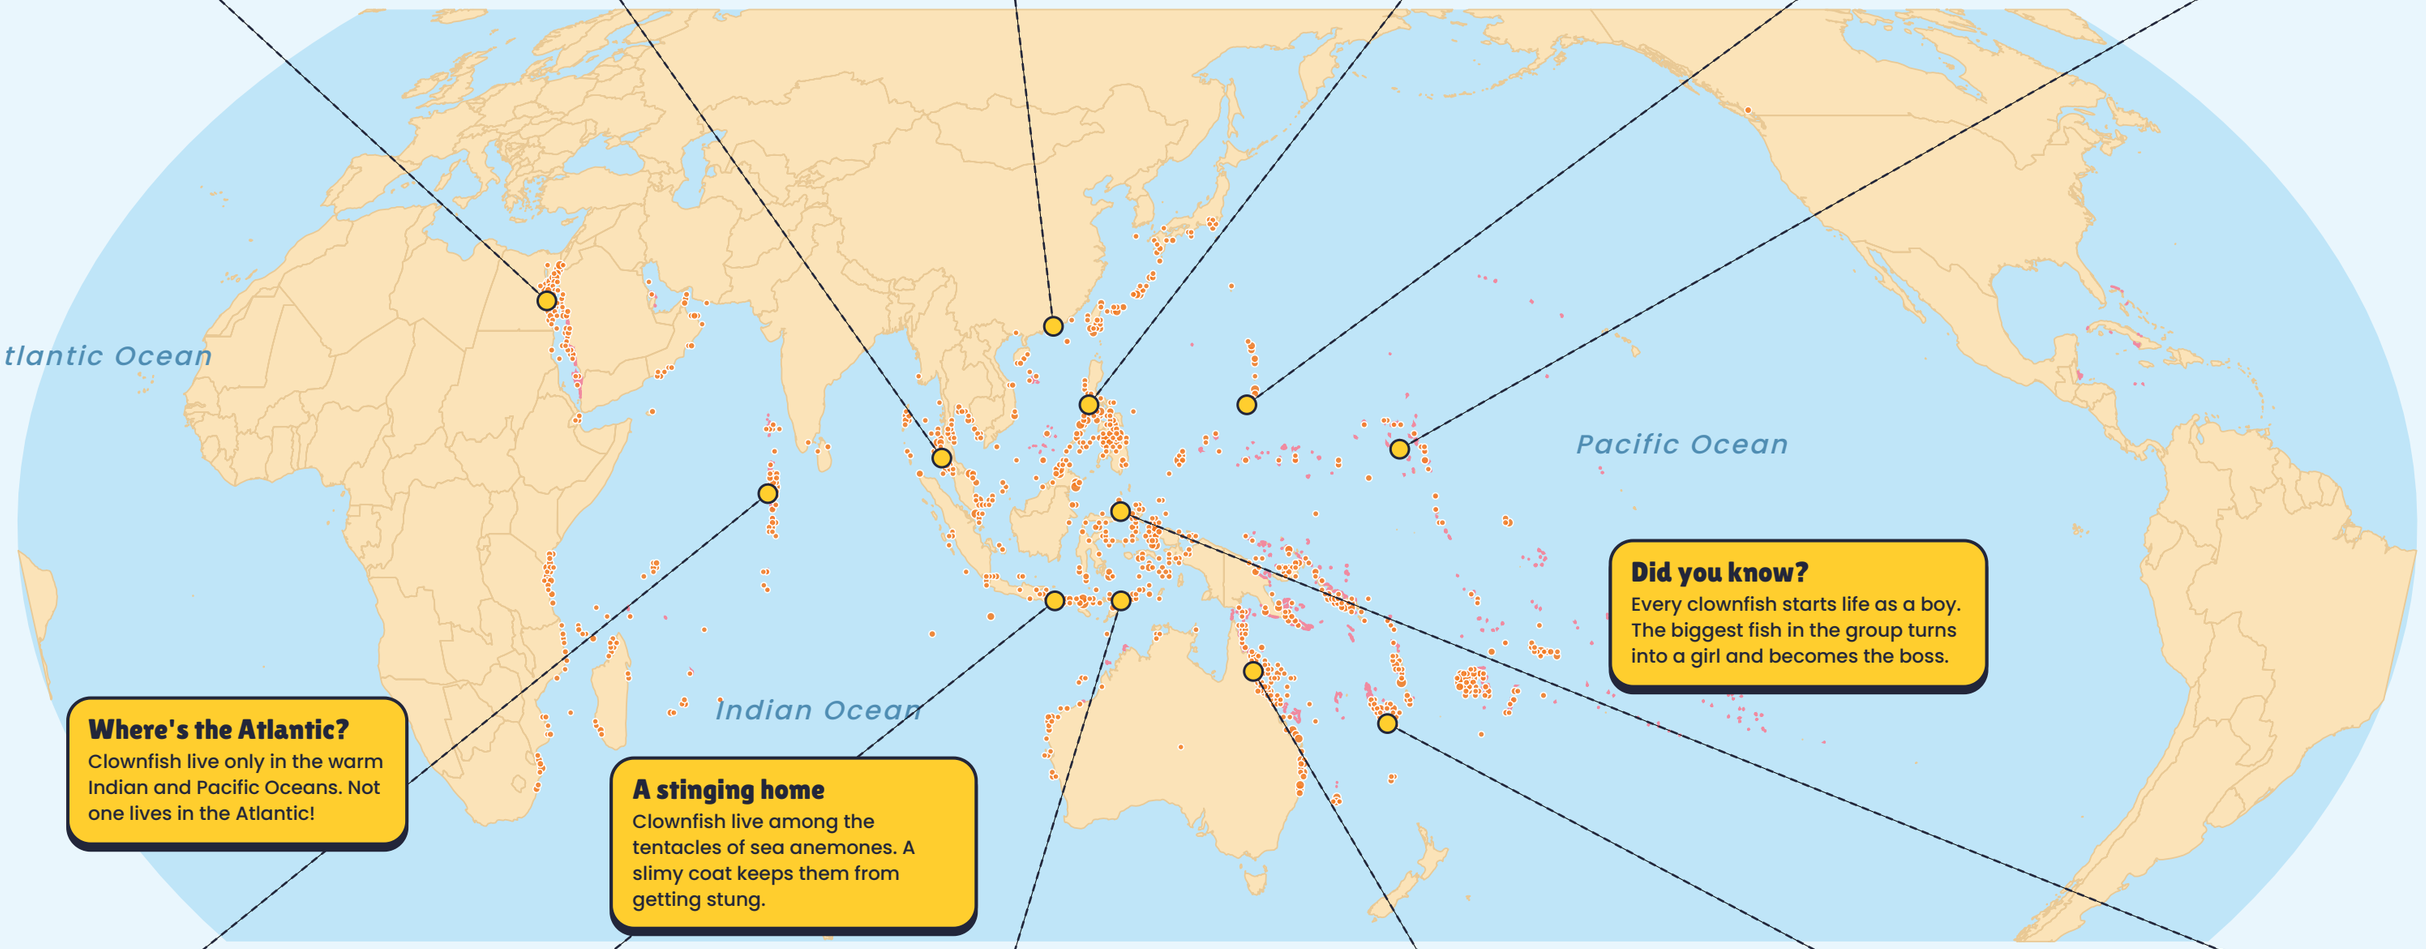

Tomato clownfish
Amphiprion frenatus
Babies have two or three white bands, but grown-ups keep only one.

Red-and-black clownfish
Amphiprion melanopus
Its dark sides make it look as if it's wearing a black jacket.

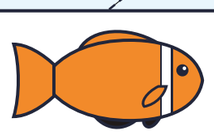

Pink skunk clownfish
Amphiprion perideraion
It's named for the white stripe along its back, like a skunk's.

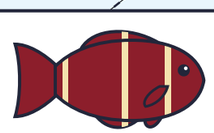

Where's the Atlantic?
Clownfish live only in the warm Indian and Pacific Oceans. Not one lives in the Atlantic!

A stinging home
Clownfish live among the tentacles of sea anemones. A slimy coat keeps them from getting stung.

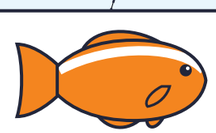

Did you know?
Every clownfish starts life as a boy. The biggest fish in the group turns into a girl and becomes the boss.

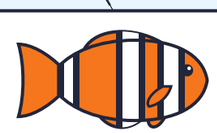

Maldives anemonefish
Amphiprion nigripes
Nigripes means 'black feet': look at the dark fins on its belly.

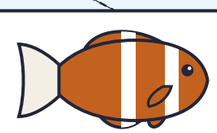

Maroon clownfish
Amphiprion biaculeatus
The biggest clownfish: the females can grow to about 17 cm long.

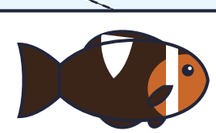

Orange skunk clownfish
Amphiprion sandaracinos
Its white stripe starts right at its top lip.

Orange clownfish
Amphiprion percula
It looks almost the same as the common clownfish, but its black edges are much thicker.

Barrier Reef anemonefish
Amphiprion akindynos
Its name comes from a Greek word meaning 'harmless'.

Saddleback clownfish
Amphiprion polymnus
The white patch on its back looks like a horse's saddle.
